

FINNO

The new Finno – a classic refined with touches of modern design

We listened to designers and, first and foremost, the users. This resulted in five new colour schemes and streamlined Scandinavian design.

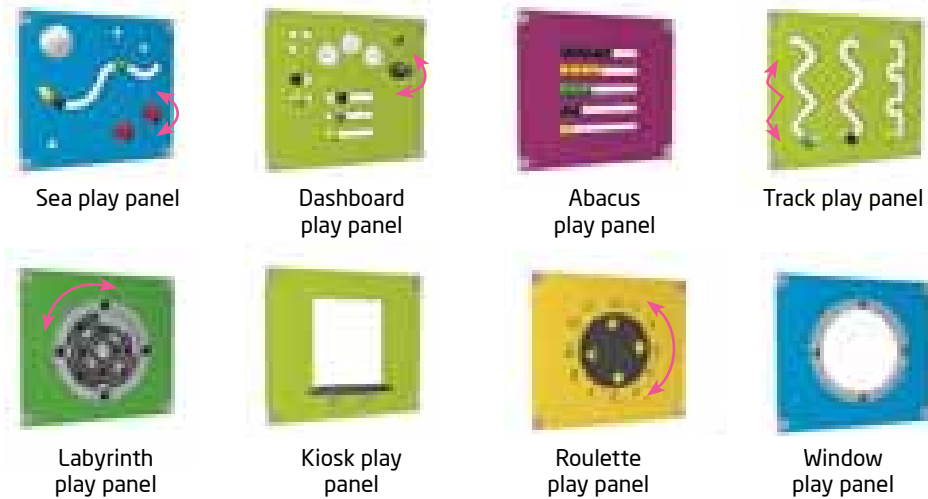

We dared to give our classic a revamp, and now it is available in five different colour schemes and refined with a new modern touch. The idea for new colour schemes came from both the designers and users. The fresh worlds of colour are harmonious, inviting children to play. In design, on the other hand, we opted for Scandinavian approach with clear lines. Now the structures are more open and have more air around them, with such concrete examples as see-through climbing walls and narrower beams.

Going outdoors together

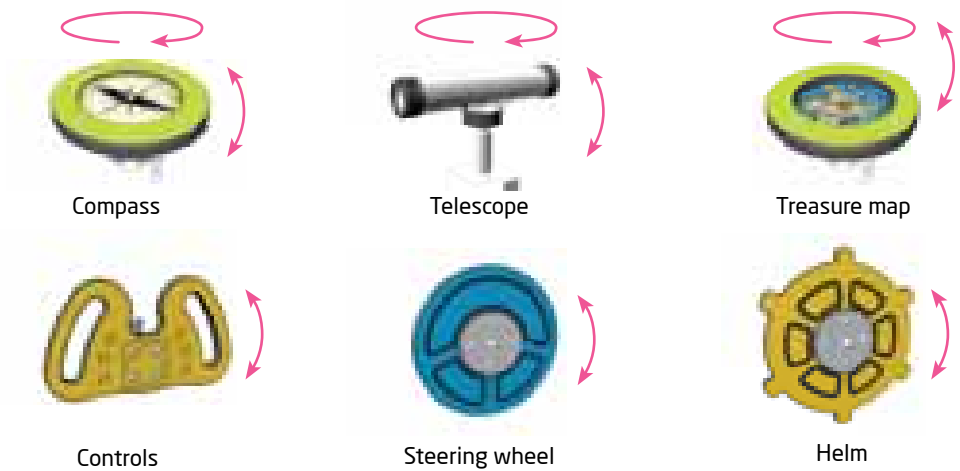

So, there are now five new and bright colour schemes: Lime Green, Apple Red, TuttiFrutti, Liquorice Grey and Candy Fuchsia. In addition to its colours, the design of the Finno range is implemented along the same lines as that of the Fitness and Senior Sport equipment ranges. The Finno playgrounds can be seamlessly combined with other product ranges, such as sports area equipment. One of our basic philosophies is to provide children and their parents with a chance to move and exercise together.

Examples of play activities

We design constantly new play functions for the joy of children.
For more information on play functions, please visit our website at www.lappset.com

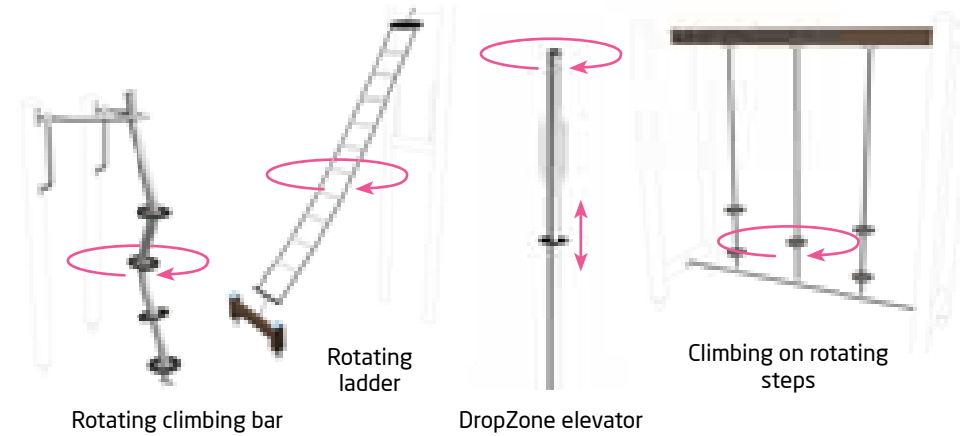

Turning and switching small buttons and controls develops children's fine motor skills. Using the sense of touch improves also three-dimensional perception.

In role play children have the opportunity to practice experiencing and expressing feelings.

Movement and play help children towards better awareness of themselves and their skills. Facing danger is also a natural part of growing up and developing.
In climbing ladders and networks children make use of all four limbs, which helps them achieve better physical awareness. At the same time they learn to control and coordinate both right and left side.

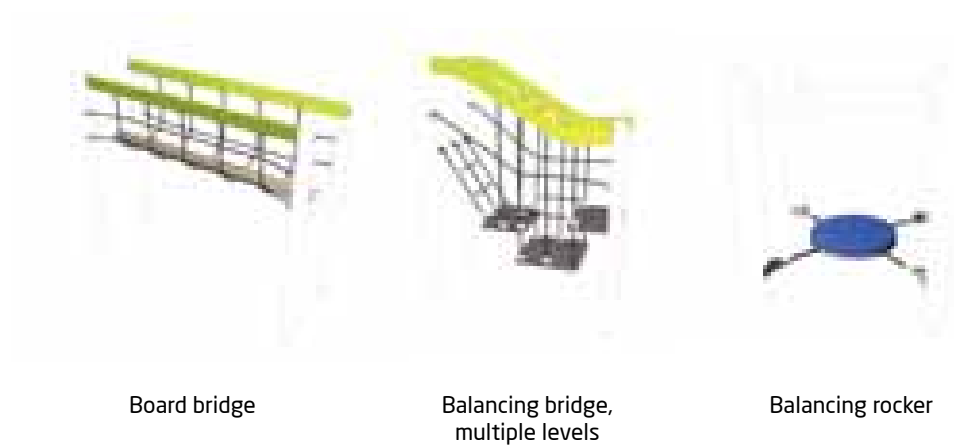

Climbing also interests older children, being a natural opportunity for learning to avoid danger. When children face their fear and test their skill on a climbing frame, they become more ready to face the unexpected.
Exciting DropZone elevator can be combined with various Finno and Cloxx play equipment.

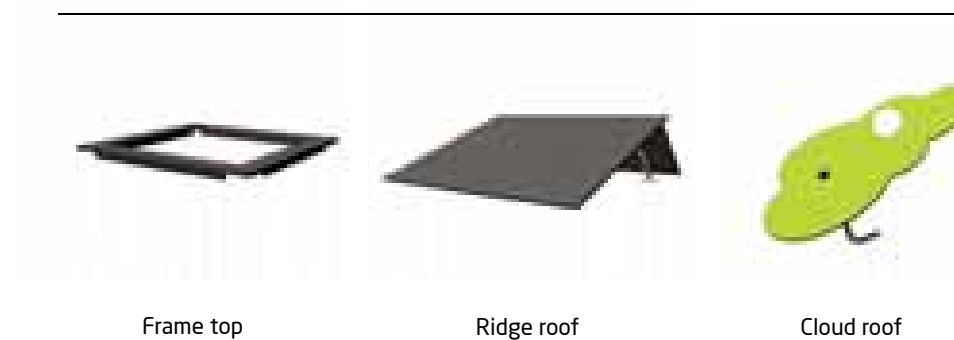

The surrounding conditions should be kept in mind when choosing the slide material. In warmer climates, under direct sunlight, plastic slides will not get too hot for sliding. If the park equipment is for rougher than average use, high pressure laminate is recommended.

The Tube is a unique product in our product range. Because the Tube is assembled out of modules, it can be made into nearly any shape. It can also include transparent parts. Thanks to its modular structure, the Tube also rises higher than other slides.

Balance protects the body from injuries by preventing accidents. The most intense development phase of balance takes place between the ages of 5 and 7, but its maintenance and development need constant training.

Even light balance training strengthens the cooperation between the sense of sight and the sense of touch in the soles of the feet. This is developed further through repetition. Balancing also improves body control, which helps individuals to perceive themselves in relation to the surrounding space.

Frame top, ridge roof and cloud roof are made of durable high-pressure laminate of high quality that it is easy to keep clean. The cloud roof comes in eight different colours.

Make your own mix!

The new Finno allows endless combinations within the same product.

To design your own Finno, choose a basic product and:

- A) Roof option
- B) Colour of ropes
- C) Slide
- D) Colour of climbing wall
- E) Colour of effect beams
- F) Colour of walls and HPL elements
- G) Colour of handrails
- H) Colour of posts and beams
- I) Foundation
