WALL BOULDERING
- ROCK CLIMBING IN
YOUR LOCAL PARK

“ Climbing is suitable for everyone because it’s a really versatile sport. Climbing develops strength, balance, suppleness, and general physical control using the deepest muscles - and most importantly of all, mental control. Climbing is also extremely sociable. Current and future climbing friends cheer each other on and pass on advice. Spontaneous encouragement is what makes the climbing experience special, whatever age you happen to be.

■ Finland, Hanne-Mari Valtonen, climber, Rovaniemi

Teens are into climbing

Physical control at its height

Although these days climbing is seen as just another sport, it is in fact a natural way for humans to move. Climbing challenges the whole body. Hands, feet and eyes need to work together in perfect combination. Climbers have to be able to assess their own strength and abilities accurately. As a sport, climbing, is divided into many different sub-disciplines, each with their own rules. Bouldering is the most unrestricted of these climbing disciplines. There aren't really any rules and you don't need any special equipment. Bouldering interests girls just as much as boys.

In the footsteps of professionals

Lappset's Wall Bouldering products are designed in consultation with professional climbers. This professional input is particularly evident in the physical challenges offered by the products, as all the climbing routes follow in the footsteps – and handholds – of the pros. Expert design ensures that the equipment gives young people an opportunity to genuinely challenge themselves and their skills, safely. Even gentle climbing results in an improvement in body strength and develops agility and coordination. This is why all Lappset's Wall Bouldering products have ready-made routes for beginners and experienced climbers.

A genuine climbing experience in parks

Lappset's Wall Bouldering products come in two basic types, either based around a cube or similar to a climbing wall. With both types of product, negatively inclined surfaces are designed such that the physical challenges

they pose suit even the demanding practices required by professional climbers. The largest of the cube and wall designs have room for several climbers at any one time. Thanks to a wide range of routes, even the smaller versions offer a wealth of physical and intellectual challenges.

Lappset's Wall Bouldering products are the only climbing products on the market whose holds, or grips, the projections used to climb on the products, are made of rock mass. This means that the climbing experience is as similar as possible to genuine rock climbing and using the products is safe also in challenging weather conditions.

Safe challenges for teens

Thanks to their appearance and functionality, Lappset's Wall Bouldering products are ideally suited to a wide range of different environments. In school playgrounds or public parks for example, our climbing products perfectly complement existing structures. The physical challenges of the products on offer are designed for teenagers and upwards, they are a good option for urban environments too.

The construction of Lappset's Wall Bouldering products takes into account the potential need to adapt the products over time. In all our products it is easy to replace the complete panel containing the routes. Modifying a product already in situ is an extremely cost-effective way of offering users new stimuli and new challenges.
